Payment Aggregator

Two fintech startups recently received the final **licence from the Reserve Bank of India (RBI)** to operate as payment aggregators.

About Payment Aggregators:

- A payment aggregator is a **third-party service provider** that enables customers to make and businesses to **accept payments online**.
- They enable their clients to accept various **payment methods** such as debit cards, credit cards, cardless EMIs, UPI, bank transfers, e-wallets, and e-mandates.

Features of Payment Aggregators:

- **Sub-Merchant Account:** PAs assist in setting up sub-merchant accounts, allowing businesses to accept payments. Without such accounts, transactions cannot be processed.
- **Documentation:** To create a sub-merchant account, businesses need to provide documents like proof of business address, bank account statements, and PAN card details.
 - There may be KYC procedures involved in the onboarding process.
- Efficient Onboarding: A reliable payment aggregator can expedite the merchant onboarding process, often completing it within a few days.
- Payment aggregators prioritize security to prevent fraud and safeguard customer data.

Working of Payment Aggregator:

- Payment aggregators provide businesses with a simplified way to accept payment from multiple sources.
- First, the business **creates an account** with the payment aggregator, which provides them with **merchant accounts** to accept payments.
- When they are ready to purchase, they head to the checkout page and select their preferred payment method.
- The acquiring bank receives the transaction information from the merchant.
- The card company then runs a fraud check to ensure the transaction is legitimate.
- Issuer accepts or declines the transaction and sends funds to the acquiring bank.

• The acquiring bank **requests the funds from the card issuer**, which are then transferred to the merchant's account.

Types of Payment Aggregators in India:

- Third-party payment aggregator: These independent companies provide payment aggregation services to businesses.
- They partner with multiple payment providers to offer their customers a range of payment options.
- Bank payment aggregators: these are payment aggregators that are owned and operated by banks.
- They offer a more limited range of payment options but may be preferred by businesses prioritizing security and reliability.

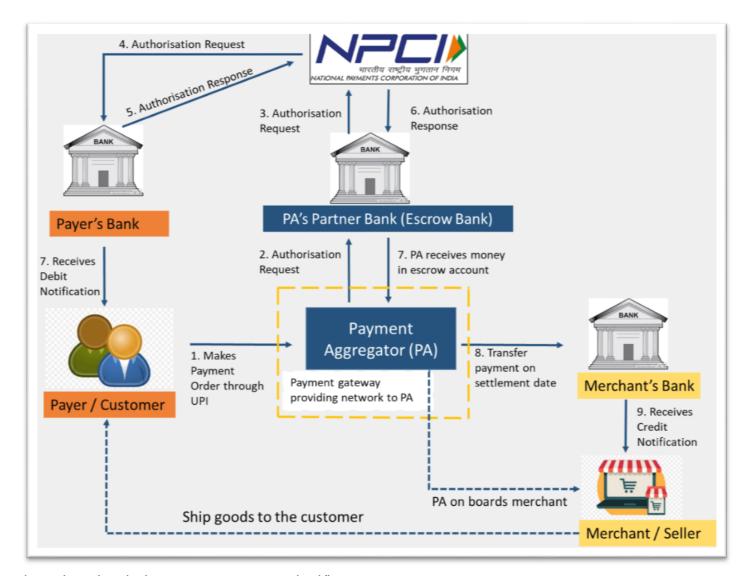

Fig 1: End to end non-bank payment aggregator transactional flow

The blue dotted lines in the fig. do not form part of payment system, but forms an important part of legal basis in merchant on-boarding process and shipment of goods to the customers in a PA business model.
